

## POP UP Work Tent - Set Up Instructions

1. Our POP-UP Work Tents include a carry bag. Remove your Work Tent from the carry bag.

2. The three full sidewalls and the roof have each got a round steel disc on the inside of the Work Tent. This disc accommodates the tension rods. Before the next step, please ensure all the tension rods are safely fixed to the steel discs.

3. Locate any of the outside black loops. These loops are placed on the outside of the Work Tent, and always in the middle of the three sidewalls and the roof.

4. Pull the black loop all the way towards yourself so that the sidewall or roof is now stretched taut.

5. Repeat with the remaining loops, stretching taut all the sidewalls and the roof.

6. The Work Tent is now finished and ready to be used.

7. To take your Work Tent down, repeat the above steps in the reverse order. Instead of pulling the loops, push them inwards, so as to relieve the tension on the rod frame.
